

PRODUCT OVERVIEW

# Managed File Transfer in the Cloud

## Highlights

- Enterprise-class managed file transfer solution
- Proven MFT solution with thousands of connections and millions of transfers
- Secure, reliable and scalable B2B cloud platform
- Fast connectivity and implementation by expert managed services

## The Growing Need for Secure File Transfer

The need to share files between multiple companies and systems has become mission critical for enterprises of all sizes. At the same time, file types, size and volume are increasing at an exponential rate, making traditional sharing methods, such as email, not practical. In addition, the exchange of large sensitive files, such as CAD/CAM designs, healthcare records, financial information or HR files, has become common in the workplace, but brings high security risks, especially if using FTP, email or other insecure transports.

To solve this challenge, many employees have turned to free or inexpensive file transfer solutions outside the realm of IT. While these solutions solve the short-term need, the lack of visibility, potential lack of data protection, and the inability to audit these exchanges puts your company at risk and can compromise the

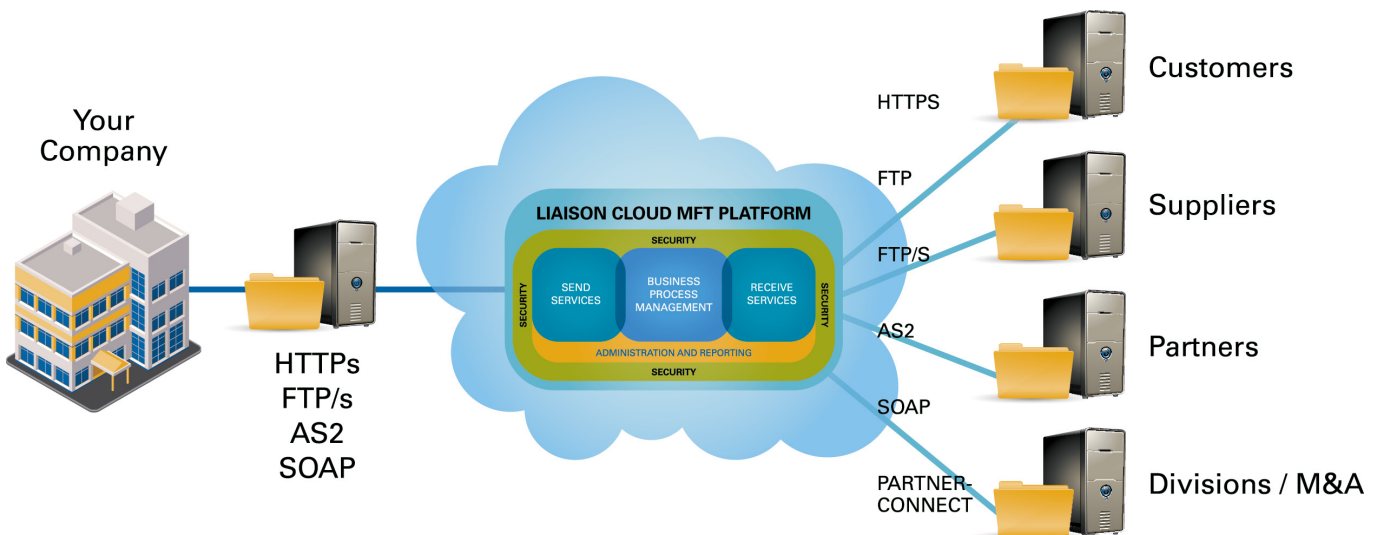

integrity of your company data. Liaison provides a cost-effective alternative, with a cloud-based managed file transfer solution delivered as a managed service.

## Enterprise Cloud MFT Solution

Liaison Managed File Transfer (MFT) offers a streamlined, secure and easy way for companies to exchange information of all types, even large or sensitive files, with a secure machine-to-machine file transfer solution. Liaison MFT leverages a proven cloud integration platform, providing a reliable and scalable solution while reducing the cost and complexity of transferring files within and between organizations.

## Benefits of Liaison’s Cloud-based MFT include:

- Single cloud platform for MFT and B2B Process Integration
- Experts manage the file transfer and connectivity for you
- Fast implementation and connectivity
- Multiple protocol support and mediation
- Real-time visibility and reporting of file transfer transactions
- No additional hardware or software added to your infrastructure
- Cost-effective monthly subscription fee

## Proven Cloud Platform for Security, Scalability and Reliability

As a true cloud-based platform, unlike on-premise or hosted instances, Liaison is able to meet the scaling demands of today's message-intensive enterprises. Capable of efficiently handling millions of files of up to 40 Gigabytes each, there is no limit to the number of files you can exchange at any given time. If you find your file transfer needs continue to grow, Liaison's cloud-based B2B integration platform will scale with you. Most importantly, Liaison allows you to scale up or down with ease.

In addition to being able to accommodate large size and volume of files, Liaison allows you to confidently transmit critical business information. Liaison's MFT provides secure file transfer by utilizing a high level of security policy management. Leveraging industry standard security methods to protect your data in transit, such as key management and access controls, Liaison makes sure your files are delivered securely and to the right recipient.

As well, Liaison mediates between disparate security policies, enabling all companies transferring files to maintain their security or authentication policies. In fact, Liaison holds a patent for its innovative key management technology that mediates between systems or companies with different security policies or security management schemes.

## Centralized Control and Visibility

Liaison's MFT solution provides centralized management and visibility through Liaison's community portal, allowing you to track and manage all file transfer activity. Liaison's community portal provides real-time reporting, giving you insight into your file transfer activity and enabling you to quickly identify and resolve any problems. If you utilize Liaison's integration platform for B2B integration processes as well as file transfer, then you have a comprehensive view of all the transactions in one central location. The portal's real-time alert notification capability, easily accessible via your mobile device or PC, keeps you aware of any issues that arise so you can quickly resolve them or contact Liaison for more information.

## Liaison Cloud MFT Key Features

The Liaison MFT solution provides enterprise-class capability and a proven cloud platform to manage the most demanding system-to-system file transfer in a cost-effective, frictionless manner.

- **Protocol Management & Mediation:** Multiple protocol support and seamless mediation of different transport protocols across the community.
- **High Scalability:** Cloud architecture enables dynamic scalability to accommodate increased business needs.
- **Large File Size and Volume Support:** Handles up to 40 Gigabytes per file with millions of transactions supported.
- **File Broadcasting:** Send one file to multiple recipients or multiple files to one or many recipients easily with the ability to utilize and manage distribution lists.
- **Retry:** Liaison will retry any file transfer that is not successful. Retry can be customized by the time frame, frequency and number of attempts.
- **Polling:** For companies unable to send data easily, the polling functionality can go "pick up" the files for transfer.
- **Notifications and Alerts:** Automated alerts or notifications of errors or issues. With Liaison's community portal, you can receive notifications and alerts via email or SMS text.
- **Central Visibility, Control and User Management:** All file transfer customers receive free access to Liaison's community portal, which provides centralized control and dashboard views of all file transfer and B2B process transactions.
- **Intelligent Routing:** Liaison enables you to route files based on unique IDs, aliases, ID correlation and multiple recipients.
- **Secure Send & Receive:** As a leader in cloud integration security, Liaison maintains data protection throughout the file transfer process.
- **Key Brokering Management:** Liaison's patented technology ensures not only that your data is encrypted but that the encryption keys are managed and protected and provide cryptography policy mediation.
- **Flexible Authentication Support:** Supports both basic auth, such as user name and password, as well as certificates.
- **Integrity Checking:** Ensures that the file sent to the recipient is intact and was transferred correctly.
- **Tier 1 Support:** Since Liaison MFT is delivered a managed service, we handle Tier 1 support for all of your questions or issues.
