

Data Management, Integration and Security Solutions

FOR THE FINANCIAL SERVICES INDUSTRY

Financial transactions of every kind have moved from paper to digital. Customers and partners expect fund transfers, securities settlements and credit approvals to take place anytime, anywhere, on any device. To meet these expectations, financial institutions must be able to coordinate complex data flows—quickly and securely.

As daunting as this is, it can be done. Liaison's proven solutions will help you seamlessly integrate and globally manage your organization's mission-critical data so that it can go to work for you in all kinds of ingenious and value-adding ways, boosting your bottom line and strengthening customer and partner relationships.

Many of the world's largest commercial banking, group insurance and securities processing firms depend on Liaison for a more complete, organized and timely view of their operations. You can too.

Seamless Data Integration

Our tailored solutions combine the movement, transformation and securing of data for seamless integration across your enterprise.

RELIABLE MOVEMENT OF DATA

The reliable, secure and timely exchange of data with business partners and customers is critical to the success of any business. Liaison offers a full range of solutions that connect you inside and outside your enterprise.

From on-premise to cloud-based (or a hybrid of both), Liaison's communications solutions use today's prevalent communications protocols and security to provide real-time data exchange and monitoring.

FLEXIBLE TRANSFORMATION OF DATA

The data that moves across your enterprise has to be meaningful to the many diverse systems and applications charged with consuming, analyzing and acting upon it. Liaison's mapping solutions provide that meaning by transforming data into the native formats required by disparate systems.

Outsourcing your mapping operations gives you the power of the Liaison Cloud Integration Platform and flexibility through the true ownership of maps, as our solution creates them to be portable.

SECURING DATA TO MEET COMPLIANCE MANDATES

There is a fine balance between making data easily accessible across your organization and ensuring it is protected from unauthorized access. Finding this balance is critical for financial services providers due to the many government regulations that oversee the protection of customers' personal and financial information including bank and credit card account numbers, income and credit histories and Social Security numbers.

To ensure your enterprise is compliant with the Gramm-Leach-Bliley (GLB) Act, Payment Card Industry Data Security Standard (PCI DDS), EU's Data Protection Directive and other applicable government data security standards, Liaison offers cloud-based tokenization and on-premise encryption solutions. Our tokenization solution successfully manages the competing objectives of access and security through innovative tokenization technology that preserves the original format of the data for business operations continuity.

Global Management

To fully leverage your integration efforts, mission-critical data should be consistent, accurate and standardized throughout your organization. Liaison's flexible, cloud-based data management solutions will resolve the plaguing issues of data redundancy and inconsistency to provide a synchronized, comprehensive and trusted view of your data.

In addition to being more flexible and scalable than traditional on-premise solutions, cloud-based data management has a lower cost of entry and faster time to implementation. We should know, Liaison was the first company to unveil cloud-based data management solutions.

One-of-a-Kind Solution

Once developed, your data integration and management solution will be the only of its kind. That's because Liaison adapts every offering to meet the unique needs of your environment. You can choose any combination of products, in any configuration, for a custom deployment that resides on-premise or in the cloud.

Liaison has experts ready to assist every step of the way from initial consulting to solution building to ongoing hosting. With Liaison, you decide how best to move, transform, secure and manage your business-critical data—and we help make it happen.
